|                                   |                              |                           | 147 Dawn redwood               | winterberry               | K Pekin lilac           |
|                                   |                              |                           | 148 sassafras                  | common witchhazel         | L Korean spice viburnum |
|                                   |                              |                           | 149 allegheny serviceberry     | B prairie willow          | hydrangea               |

This map was adapted from the original landscape plan drawn by landscape architect Anthony Tzynik in 1996. Please note that plant common names are only capitalized when referencing a proper noun.

# POCKET GUIDE TO TREES & SHRUBS

## THE BRENTON ARBORETUM

### ABOUT OUR TREES & SHRUBS

The first trees were planted at this 140-acre arboretum in 1997. As of 2013 there are 2,200 trees and shrubs in the Arboretum's collections representing 180 species from 86 genera.

When trees and shrubs are planted at the Brenton Arboretum, a tag is attached including a botanical name and accession number. This number, and information about seed source, planting date and growth habits, are recorded in our database.

Look for the tree tags as you walk through the Arboretum. They will help you identify our trees and shrubs. Please contact the arboretum for information about newly-planted trees with temporary tags.

If you find a tree without a tag, please let us know. Most of the tree and shrub collections are planted informally in groups of the same species, allowing you to compare similar trees.

Accession number 97-158 indicates that this tree was the 158th tree planted in 1997.
